

CLEANING INSTRUCTIONS

GENERAL MAINTENANCE

No metal fixture, no matter the finish, is guaranteed against corrosion especially in salt air environments. If your fixture will be installed in a location near salt water, we recommend cleaning it monthly. If your fixture is not installed in a location near salt water, we recommend periodic cleaning with a mild soap-and-water wash and gentle buffing to extend the life of our painted finishes.

COPPER & BRASS

To keep copper and brass shades clean of oils and oxidization, use a soft cleanser to gently wipe down the surface of the shade, moving in the same direction as the lines. We recommend Brasso for brass fixtures, and Bar Keepers Friend for copper fixtures. Use gloves while cleaning to ensure oils from the skin are not transferred to the shade.

Please Note: If copper/brass is not routinely cleaned, patina will occur.
